## Profile

With over 11 years of experience in software engineering, I design, develop, and create innovative web platforms that solve complex problems and deliver value to users and clients. I am a certified Professional Scrum Master (PSM) who leads agile teams and fosters collaboration, communication, and quality.

Currently, I work as a staff software engineer at Ledn, a fintech company that provides digital asset savings and credit products. At Ledn, I use my skills in web languages, cloud AWS architecture, document databases, and web services to build scalable, secure, and user-friendly applications for the crypto market. I also leverage my knowledge in mobile solutions, search engines, and containerization to enhance the performance and functionality of Ledn's products. I am passionate about learning new technologies and staying updated on the latest trends and best practices in software engineering.

## Summary of Qualifications

- Adaptable to change
- Organized
- Motivated
- People oriented
- Strong communication and analytical skills
- **Web languages** (Java 8, **Node.js**, HTML5, Typescript)
- Design **mobile** solutions (Android, iOS)
- Design and implement relational databases. (MySQL, MSSQL)
- Document Databases NoSQL (MongoDB).
- Search Engines (Elasticsearch)
- Web Services with SOAP and **REST API**
- **Microservices** (Spring Boot, **Express JS**, Loopback JS)
- **Containerization**: Docker and **Docker Swarm**
- **Cloud**: AWS Deployment of distributed applications

## Professional Experience

### Staff Software Engineer

Oct 2021 - Current

Ledn <https://ledn.io>

- Implemented withdrawal verification engine to automate decision process reducing the amount of time required by the customer service department by 5 times.
- Implementing new **AWS lambdas** to add new features to the system using a serverless environment.
- Coordinating with **Scrum Team** to deliver new features aligning with deadlines and quality.
- Automating processes to reduce the amount of work of Customer Service on the platform.
- Implemented new **Unit Tests** covering critical scenarios for withdrawal requests.
- Contributing to the design and **Architecture** of new features until implementation.
- Participating actively in **design** and architecture meetings to improve the current system.
- Mainly working as a backend developer collaborating with the frontend team to deliver new features.
- Sharing experience with less new engineers helping them create robust and solid solutions according to the current technology.

## Senior Software Engineer

May 2018 - Sep 2022

Architech <http://architech.ca>

- Contributing to a logistic management application for the shipping of Coal Internationally.
- Building Microservices to support the load of the application and rapid production deployments.
- Working as a **Full Stack developer** maintaining and improving applications using **Spring Boot** for the backend and **Angular** for the front end.
- Improving the CI/CD pipeline to allow rapid deployments into the development and production servers.
- Creating new features to maximize the work done in the terminals when Trains and Vessels arrive at the terminal to load coal and ship it around the world.
- Translating business requirements in an Agile environment working with a local and a remote team.
- Designing new features to maximize the time of the crew in the terminals.
- Migrating currently from **Docker Swarm to Kubernetes**.

## Software Developer II

Experian Inc. Canada (Full time) <http://www.experian.com> February 2014 – October 2017

- Accomplished with my Team an effective migration from a legacy Monolithic system to a new Architecture based on Microservices. Queries were optimized by changing the way information was stored and implementing **NoSQL (MongoDB)** Databases to store dynamic documents in a more efficient way.
- Search Engines like **Elasticsearch** were used to reduce the time of searching for information by using customized and dynamic queries for the clients.
- Services Discovery systems (**Zookeeper**) were applied to maintain more than 10 Microservices collaborating using **Spring Boot** framework.
- In collaboration with my team we have created a Dynamic Hosted Data source solution where clients were able to configure dynamic fields and store their information for future optimized searches. The product is being used in more than 5 Countries including (Australia, UK, Brazil, Canada, Spain, Italy)
- The Agile environment process followed by Experian allowed me to successfully collaborate with local and remote teams in Bulgaria as a Scrum Master of a team of 7 people to comply with the deadlines and the proper planning of the future Sprints.
- During my time working on Experian a DevOps culture was acquired so that we were able to do continuous Integration and Deployment to production servers with automated Tests using **Cucumber** Framework.

## Software Development Engineer (Full time)

October 2010 – March 2013

Neology, Mexico City - <http://www.neology.net/>

- Web developer for international car registration system using RFID technology (Nigeria,India,Turkey).
- RFID technology integrator with web and mobile technology (JSF, RichFaces, MySQL, Linux, Tomcat).
- Installing the web systems and training people in different states in Mexico.
- Designed and developed mobile solutions for car registration systems.
- Linux administration for Java Web Platform.
- Lead team of 6 people to work on the improvement and optimization of a web system.

## International Work Experience

Neology, Mexico City

January 2011

Tolling system proposal in Ankara, Turkey

- Developing, installation and presentation of Radio Frequency Identification solution for tolling service.
- Direct communication with clients to analyze, document, evaluate and manage system requirements.
- Creation of different prototypes using Java to present cars data to the client using RFID readers.

## Certifications

Professional Scrum Master | May 2016

Link: [Professional Scrum Master Certificate](#)

## R programming | October 2016

Link: [R Programming](#)

**ILSC** <http://www.ilsc.com>

**Toronto 2013**

- International Business English Certificate.
- Working on Oracle Java SE 8 Programmer Certification and AWS Associate Developer

## Education

### Degree in Computing Engineering

IPN (Polytechnic National Institute)

Mexico City 2006 - 2010

### Professional Development (courses)

- Machine Learning (UoT)
- React Nanodegree
- Relational databases design - Spring, Hibernate, Rich Faces, JSF frameworks
- Business Intelligence with Pentaho. - Computer technical support
- Web development with Java technology – R Language
- Practical Machine Learning

## Language skills

**English:** Professional working proficiency

**Spanish:** Native language

## Extracurricular Activities

Swimming, Freelance web and app development, research, learning new languages. Creating short films.

## Personal projects:

- Mobile App: Express Entry Monitor <http://expressentrymonitor.com/>
- This project was created using Loopback JS for the REST API and having Android and iOS for the mobile versions of the Application. I have created them myself, delivering the service to more than 6000 people around the world.
- Currently doing a Blockchain Nanodegree on Udacity to create Smart Contracts to be deployed to Ethereum using Solidity language.
- I have experience creating and deploying Node JS REST API applications using Express JS and deploying them into an EC2 instance on AWS and creating a VPC using load balances to manage the load of the requests.
